OSM charting posts

We are pleased to announce that OSM Polish Association has launched a competition to collect mileage of national, provincial, and others in Poland.

The competition aims to collect GPS coordinates pikietażowych posts marked as n mi + 0 and enter it into the OSM database.

The competition should attend for two reasons. The first (obviously) is the reward. Second, the assumption chainage to be used in the activities of the State Fire Service and other services, so these data may be useful to all of us in a crisis situation

Prior to the competition, we encourage you to read the [rules](#).

The competition is set to collect data in the field. Interpolating accepted, but only up to a maximum of three consecutive points (Km),

wherein the interpolation should be determined as accurate as possible, and with tools for measuring distances that are available in JOSM (e.g. plug measurement).

The participant who will not be able to prove that the entered data were collected "in the field", may lose the right to the prize. Therefore, we encourage you to collect and preserve as much "evidence" in the form of GPX tracks and photos, so that the selection board had no doubt as to the validity of the resulting space.

Awards:

- 1 place - a material prize worth about 400 zł
- 2 place - a material prize worth about 250 zł
- 3 place - a material prize worth about 100 zł

Grand Prize is sponsored by the company [Abacus ST](#). Other prizes are sponsored by the association SSO Poland. End of the competition - June 30, 2013.

Tagging, or how to spell posts:

Participant using any of the programs for editing OSM, marks the place on the road (highway, ekspresówce, national or regional), which is marked with post pikietażowy n mi + 0 by placing the node with the appropriate tagging:

- Highway = milestone (tag indicating the post pikietażowy)
- Pk = (tag indicating the distance from the beginning of the route, the value read from the post)
- Ref = tag indicating the number of the road (eg, ref = A1)

For example, based on the picture above, the node should be tagged as follows: *highway = milestone pk = 90 ref = 933*.

The node should be placed in the axis of the road, but without sticking it to the road and other objects. Sample post in the OSM database: <http://www.openstreetmap.org/browse/node/2272107582>

How do I collect?

The easiest way is to use the purpose-written application on your Android device - [Pikietaz.apk](#). This allows the collection of bars are comfortable using a phone with a GPS receiver. It generates a ready file *. Osmium, which just opened in [JOSM](#) and after checking the data sent to the server.

Another way is to use any of the GPS receiver allows you to highlight and save waypoints. Later, the data must be converted to a format OSM properly tag (tag) editor JOSM and send. It is way more difficult and requires more attention from the participant than a dedicated application.
