Notes on tagging

The following list contains information, comments, errors on the tagging of objects placed in the competition. If errors do not hesitate to correct them. In the event of abuse, however, please use the comments on making the new facilities.

There are also tags "source = Bing". Please remember to Section 10 regulations . Please also respect the 11th those rules.

Failure to follow comments on this site may result in the deduction of "questionable" points or disqualification of the participant from the competition.
If you wish to clarify any doubts by the participant are welcome to contact .

July

1. Private facilities (eg, parking lots, gardens, swimming pools ;)) should contain a combination of 'access = private' and will not be counted in the competition

June 23

1. in the case of a combination of car 'fee = no' is treated as the default - it's not a warning (you do not need to improve), but you can skip the further editions [marimil]
2. in the car, please select the appropriate value for the tag 'park_ride' - of the competition we have 99 car parks with a combination of 'park_ride = no (not analyze the car, do not know if' park_ride 'added' the machine ') [marimil]

June 17

1. Please distinguish between the tag 'historic' (since it is the primary tag, well if he had "developed" value) that something is a monument due to other tag [marimil]

June 8

1. in the case of 'amenity = vending_machine' to denote the type of application we use the tag 'vending = *', not 'type = *'

June 4

1. in the pews do not use a combination of "surface = wood" (to determine the material used another tag)
2. tag "amenity = shop" for shopping is redundant
3. the default name (contained in the tag "name") in our country should be made in Polish
4. in the case of natural monuments, please specify the type (eg wood) and consider whether the tree deserves to be called a "tourist attraction"
5. administration of telephone / web site / e-mail to the parking machine, we consider artificial studded points (solution could be the introduction of parking meters and incorporate them in a relationship that also contains these tags) - point to the discussion
6. instead of power to create tags with "unknown", please skip them (come to a situation that the participants will make benches with backrest, color, material, number of seats = "unknown" or road to the unknown names will be called the "unknown"
7. in the case of sites available (just a suggestion) by restricting only to the historic = * - it would be "fitted" monument in its parameters (name = "name from the list of sites» heritage = 2 Ref: nid = "number from the list of sites» heritage: nid = operator - a link to the forum)

a link to the forum)
